

→ Information Security Policy

Cognyte is a leading software-driven technology company, focused on investigative analytics solutions that help customers generate actionable intelligence from large volumes of complex data across diverse operational domains, in order to enhance public safety and security.

Information security is a foundational part of our corporate governance, and our Board of Directors and executive leadership remain fully committed to a robust, continually improving Global Information Security Program aligned with leading international standards.

Lilach Solomon

VP InfoSec, Risk & Compliance

Strengthening Cognyte's Global Information Security Program

Continuously enhancing our controls and practices to protect the confidentiality, integrity, and availability of our information assets - fully aligned with our vision and business objectives.

Delivering robust processes, advanced technologies and ongoing training

Empowering employees with the tools and knowledge they need to support a secure and resilient operating environment.

Operating under a certified Information Security Management System (ISMS)

Demonstrating compliance with leading international standards and industry best practices through a structured, auditable security framework.

Implementing strong safeguards against unauthorized access and misuse

Protecting information entrusted to us by customers, employees, partners and vendors through rigorous preventative and detective security measures.

Strengthening cyber awareness across the organization

Equipping employees to recognize threats, handle sensitive information responsibly, and contribute to a culture of security.

Ensuring compliance with global regulatory and contractual requirements

Managing data responsibly throughout its lifecycle - from creation and processing to secure transfer, retention and disclosure.
